Joint Service Commendation Medal, USSTRATCOM, USAF	August 2011
Air Force Commendation Medal, ACC, USAF	October 2008

Great American Hunting Informational Site

- This was a one-person project that was created for the hunting and camping community.   It was something that I came up with to address a location where campers and hunters could go to get information as well as share there stories and pictures.

- The site utilizes HTML5, CSS3, and Responsive Design to enhance the users view from not just a desk but on multiple media sources as well.

Flower Euphoria

- This was a single page web application, created as a central point to download an application that utilized Adobe Flash CS6 with the integration of ActionScript, and FLEX.

- The web application is downloaded to one's machine and cycles through the day's of the week to bring a new flower to your desktop and a smile to your face. A future upgrade would be to integrate the use of a flower ordering link from the application and the integration of a calendar to set reminders for special events.

LDC (Lazy Days Country) – Radio Station Website Application

- This is a Late Night Radio website that I created to include the use of the different audio and video codex's. The utilization of iMovie, Adobe Products (Photoshop, Bridge, Audition, and Illustrator were used to create the videos and then I utilized a video html converter to optimize the files for faster streaming.

- The page also implements Responsive Design for cross platform compatibility to further the user experience to not just there desktop but to there other mobile devises as well

TV Show Premieres

- This is a single page web application for users to see what is on TV, allowing for quick filtering through the drop downs at the top of the page. The uses the traktv.com API, where data is extracted to display the show time, network, season #, genre and also will display the ratings for that particular show if there are any.

- This site was created with AngularJS, Bootstrap.js, JavaScript, jQuery, HTML5, CSS3 coding structures

Emerald Heart Lighthouse Collection

- This is an e-commerce site that was pulled per the client's request so that she could build up her inventory and then pushing the website back out to active again.

- This was a two-month project that I was the Project Manager, Designer, and Developer for. Utilizing my skills on all avenues from start to finish. The site uses both front-end and back-end coding with JavaScript, JQuery, PHP, MySQL, Bootstrap.js, HTML5, CSS3; all based upon the MVC architectural pattern to implement multiple user interfaces within the site and display data quickly for the user.
